

CONTEXT MENUS

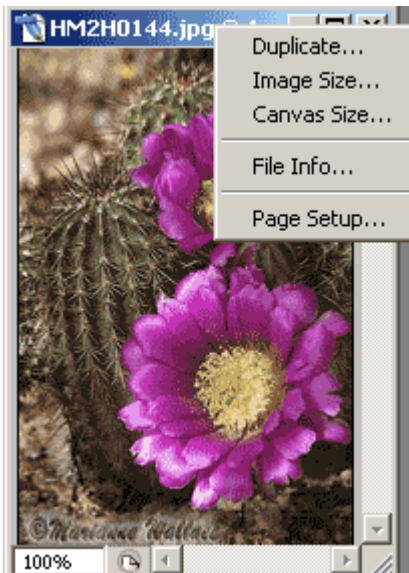

Once a tool active, you can access many of that tool's options by right clicking inside the image. For instance, click on Edit>Free Transform. Now that the bounding box is showing, Right Click inside the image. You now have access to all the options of that tool (first image below). If you have a Mac but not a two button mouse, hold the Control key and then click on the image. More examples of Context menus are below.

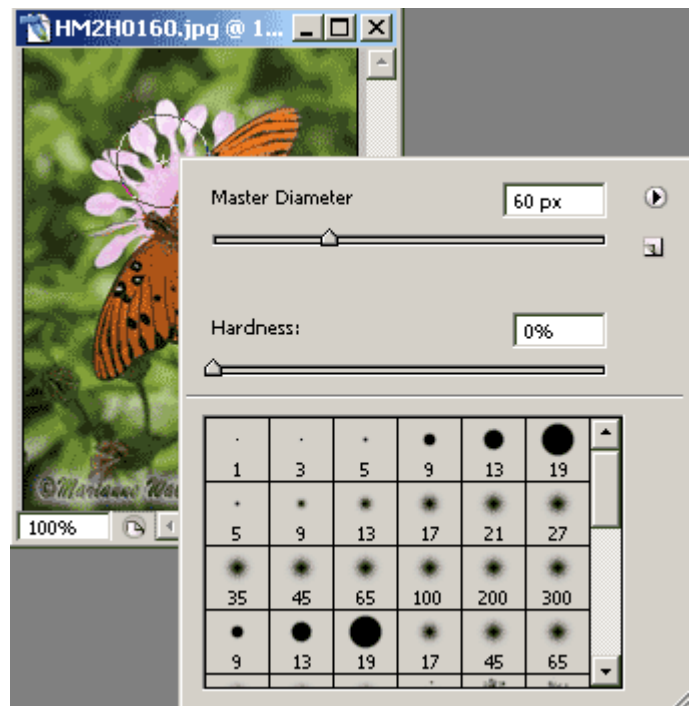

(Free Transform tool context menu)

(Move Tool context menu shows layers. Click on one and that layer becomes active)

Right Click on title bar and get image options

With Brush Tool Active, right click to get Brushes Palette
